ABSTRACT

The **Grocery Expiry Tracker** is a smart inventory management system designed to help individuals and households monitor the expiry dates of grocery items, thereby reducing food waste and promoting healthier consumption habits. The system allows users to input groceries manually or via barcode scanning, along with their expiry dates. It sends timely reminders and alerts for items nearing their expiration, enabling users to consume or discard products before they spoil. The tracker can be implemented as a mobile or web application, incorporating features like categorization, notification settings, and a user-friendly dashboard for real-time updates.

The main objectives of this system are to improve food safety, reduce unnecessary purchases, and enhance kitchen efficiency. By leveraging simple database management, user authentication, and alert mechanisms (email, SMS, or push notifications), the Grocery Expiry Tracker promotes responsible food usage and cost-saving behaviour. Future enhancements may include integration with smart refrigerators, voice assistants, and AI-based suggestions for recipes using soon-to-expire items.
