APRIL 2025

1.2 Problem Statement

While freelancing and microtasking have become prominent in the global digital economy, students within colleges still struggle to find structured opportunities that allow them to apply and monetize their skills. There exists a disconnect between students who need help with projects and those who have the capability to assist. This results in missed opportunities for learning, lack of practical exposure, and underutilization of skills that could otherwise be put to meaningful use.

Many students rely on social media groups or informal peer networks to find help for assignments, presentations, content creation, or even app development. However, these methods lack organization, transparency, and accountability. There's no assurance of quality or commitment, and disputes regarding deadlines, payments, or deliverables are common. Moreover, the absence of a centralized system prevents the creation of a strong reputation system or portfolio tracking for students.

Existing freelancing platforms such as Fiverr, Upwork, and Freelancer are designed for professional freelancers and global clients, not for intra-college student interactions. They are often too complex, charge high service fees, and do not cater to the unique needs of a student community. Additionally, they do not foster learning-focused environments or provide mechanisms for skill validation within academic settings.

TaskBridge aims to solve these issues by providing a centralized, student-focused platform for task exchange. It allows students to post tasks, find peer support, and get compensated fairly while gaining experience. The system encourages verified reviews, supports peer-to-peer trust building, and offers easy-to-use tools for tracking tasks and managing projects.

By addressing these critical gaps, TaskBridge transforms the fragmented student skill-sharing culture into an organized, reliable, and growth-oriented ecosystem.

1.3 Project Objective

The primary goal of TaskBridge is to create a comprehensive skill-exchange platform exclusively for students within a college or academic institution. This platform seeks to address the dual problems of underutilized student talent and difficulty in finding reliable help for various academic and creative tasks. By facilitating peer-to-peer interaction, TaskBridge aims to create a balanced system where every student has the opportunity to contribute, learn, and grow.

One of the key objectives is to ensure fair compensation and recognition for the work students complete. Through a verified review and rating system, the platform promotes accountability and rewards quality contributions. This enables students to build trust, track their progress, and gain valuable feedback that can be showcased on portfolios and resumes.

Another crucial objective is the promotion of entrepreneurship and self-reliance. TaskBridge provides students with the flexibility to choose the type and volume of work they want to engage with, thereby giving them a taste of freelance culture within a safe, peer-regulated environment. Students can test their skills, explore different domains, and understand market demand — all within their own campus.

the objectives of TaskBridge include:

- Enabling fair, task-based collaboration.
- Supporting financial independence and career readiness.
- Promoting entrepreneurship through micro-engagements.
- Building a culture of trust, accountability, and peer learning.
- Offering a scalable system that can be adapted to any campus.

1.4 Project Report Organisation

This report is systematically structured to provide a comprehensive understanding of TaskBridge, its development process, and the key outcomes. The organization of the report is as follows:

- Chapter 1: Introduction – This chapter outlines the motivation behind the development of TaskBridge, the challenges it seeks to address, and the primary objectives of the platform.
- Chapter 2: Literature Survey – A review of existing platforms and solutions that address similar needs, such as Fiverr, Upwork, and other student-specific job portals. This chapter also highlights the research gap TaskBridge aims to fill and presents comparative analysis.
