ABSTRACT

Stock Trend Analyzer is a lightweight web application used to help users track and analyze stock market trends with ease. Through the real-time financial information from the Alpha Vantage API, the system allows users to search for a stock symbol, get detailed information about the stock such as open, high, low, and close prices, and see past price movements as dynamic charts.

The app also provides actionable insights by recommending whether a stock is moving towards a Buy, Sell, or Hold suggestion based on recent performance trends. Users can also set price alerts based on customizable thresholds to get notified when a stock hits a certain level. The app also offers instant tracking of leading indices like the Nifty 50 (NSE) and Sensex (BSE) and has a built-in currency converter for calculating real-time exchange rates.

With an emphasis on simplicity, responsiveness, and instant updates, the Stock Trend Analyzer provides a effective and affordable facility for both novice investors and enthusiasts of finance to make more informed trading decisions without having to turn to complex and expensive financial platforms.
