ABSTRACT

This Pack Your Purse application aims to simplify the entire process by providing an all-in-one platform to assist travellers in organizing their trips within a specified budget. By integrating multiple functionalities, such as budget management, itinerary planning, and real-time recommendations, the system delivers a comprehensive solution for travel enthusiasts.

The platform enables users to input essential travel parameters, including budget, the number of people, and the duration of the trip (days and nights). Based on this data, the system generates tailored recommendations for traveling expenses (including round-trip transportation), hotel stays, meals, popular tourist attractions, shopping hubs, and local transportation options. Each recommendation is accompanied by detailed pricing to help users stay within their budget. The system also includes a feature to add notes, allowing users to sketch their daily itinerary. Additionally, a built-in language translation tool facilitates easy communication with locals, ensuring a smoother travel experience in foreign destinations.

This Pack Your Purse not only enhances user convenience but also promotes cost-effective and well-organized travel planning. Its focus on offering personalized recommendations and real-time updates sets it apart from traditional planning methods, making travel an enjoyable and stress-free experience
