ABSTRACT

The Canteen Management System project proposes a digital solution to optimize and automate the interaction between students, the college administration, and canteen services. ivIn many academic environments, canteen transactions are still handled using cash, leading to inefficiencies, manual errors, and a lack of transparency. This system aims to modernize these processes through the introduction of a prepaid wallet system, funded at the time of annual fee payment.

This application empowers students to use their unique student IDs for purchases, with the cashier initiating the transaction through the system. The application then sends a real-time notification to the student for approval. Once approved, the amount is automatically deducted from the student's canteen wallet and a digital receipt is generated and shared with the student, canteen, and administration.

The system ensures secure, transparent, and traceable transactions, promoting financial accountability and operational efficiency. By eliminating the need for physical cash, it reduces errors, enhances user convenience, and improves institutional oversight over canteen activities.
